MATRIX

€30 MILLION FUNDRAISE FOR ACCSYS TECHNOLOGIES

Matrix Group's investment banking business announces the completion today of a €30 million fundraising for Accsys Technologies PLC (AIM: AXS.L), the environmental science and wood technology company, by way of a Firm Placing and Placing and Open Offer with new and existing institutional investors and a subscription by certain of the Directors and Senior Managers for new Ordinary Shares.

Matrix acted as Nomad, financial adviser and joint broker with Numis Securities to Accsys for the fundraising. Matrix also helped Accsys raise €16.9 million in February 2010.

The net proceeds of the Firm Placing and Placing and Open Offer will be used to meet the short-term working capital requirements and on-going operating costs of Accsys and to meet the costs of construction relating to the expansion of the Arnhem plant.

Malcolm Le May, CEO of the investment banking business of Matrix Group, commented:

"Matrix is pleased to have again successfully helped to raise funds for Accsys with new and existing institutions. Matrix's team saw good institutional support for the Company as it delivers on its growth strategy to continue to pursue licensing opportunities but also to focus on increasing the Company's own Accoya® sale and production capability in order to realise the potential benefits resulting from the expected increase in the demand for Accoya®. As this additional capacity is utilised, it is expected that the Group will move to a position of sustained profitability without any contribution from licence income being required."

Notes to Editors

The investment banking business of Matrix Group is a client focused, advisory, capital raising and securities sales, trading and research firm. They bring together considerable experience, knowledge and access to meet and match the strategic ambitions of growing companies and the performance needs of investing institutions. Today Matrix has a 100 strong investment banking team advising over 80 retained clients and serving the sales, trading and research needs of more than 200 institutional customers.

The investment banking business of Matrix has significantly increased research coverage and their team of 25 analysts now covers around 200 stocks across small, mid and large cap.

The investment banking business is part of Matrix Group, a privately owned financial services business in the UK with around £4 billion of assets under management and around 250 professionals employed across three divisions: Asset Management, Investment Banking and Property. Since inception in 1987, Matrix has raised £17 billion of assets for investments across these business areas.

About Accsys

Accsys Technologies PLC (www.accsysplc.com) is an environmental science and technology company whose primary focus is on the production of Accoya® wood and technology licensing via its 100% owned subsidiary, Titan Wood Limited, which has manufacturing operations in Arnhem, the Netherlands, a European office in London and an Americas office in Dallas, Texas. Accsys Technologies' operations comprise three principal business units: (i) the Accoya® wood production facility located in Arnhem, The Netherlands; (ii) technology development, focused on a programme of continuous improvements to the process engineering and operating protocols for the acetylation of wood which are currently under development and the development of technology for the acetylation of wood fibre; and (iii) the licensing of technology for the production of Accoya® wood and Tricoya® wood elements across the globe.

Accoya® Wood (www.accoya.info) is produced by using a proprietary, non-toxic process that effectively converts sustainably grown softwoods and non-durable hardwoods into what is best

described as a "high technology wood" via acetylation. Distinguished by its durability, dimensional stability and, perhaps most importantly of all, its reliability (in terms of consistency of both supply and quality), Accoya® wood is particularly suited to exterior applications where performance and appearance are valued. Unlike most woods, its colour does not degrade when exposed to sunlight. Moreover, the Accoya® wood production process does not compromise the wood's strength or machinability. The combination of UV resistance, dimensional stability, increased coatings life, durability and retained strength means that Accoya® wood offers a wealth of new opportunities to architects, designers and specifiers. Leading applications include external doors and windows, shutters/shading, siding and cladding, decking, outdoor furniture/equipment and glulam beams for structural use.

Tricoya® Wood Elements (www.tricoya.com) is Accsys Technologies' proprietary technology for the acetylation of wood fibres, chips, and particles for use in the fabrication of wood based composites, including panel products. These composites demonstrate enhanced durability and dimensional stability which allow them to be used in a variety of applications which were once limited to solid wood or man-made products. Tricoya® Wood Elements is lauded as the first major innovation in the wood composites industry in more than 30 years.

Wood Acetylation is a process, which increases the amount of 'acetyl' molecules in wood, thereby changing its physical properties. The environmentally responsible process protects wood from rot by making it "inedible" to most micro-organisms and insects, without - unlike conventional treatments - making it toxic. It also greatly reduces the wood's tendency to swell and shrink, making it less prone to cracking and ensuring that, when painted, it requires dramatically reduced maintenance. Acetylated wood's increased durability offers major carbon sequestration advantages, compared to other woods and man-made building materials such as steel, vinyl, and plastic.

Wood Composites include a range of derivative wood products which are manufactured by binding together the strands, particles, fibres, or veneers of wood together with adhesives to form composite materials. These products are engineered to precise design specifications which are tested to meet national or international standards.
